

Teeth And Gum Disease~By Max 6th Class

So the picture you see is an example of what will happen to your teeth if you keep eating sweets or sugary stuff. You can get a disease called tooth decay, and I went easy on the picture because they can get pretty nasty!

Here's a few facts.

1. You should know tooth decay is one of the most common of all mouth or teeth diseases.
2. Can you get sick from tooth decay? Your answer is yes, it's like poison, but only to your teeth!
3. If one of your adult teeth fall out in a game of football or from a hard hit, you put it back in your mouth you can hear the roots reconnecting! Although, not 100% certain! You're better off using this next fact though!
4. If an adult tooth falls out, you can put it in a glass of milk and bring that to the dentist and get it put back in!

What Tooth Decay Does X_X

Here's the serious photos, sorry guys!!!.

Guys be honest do you really want that?!

Because that's disgusting

I think we can all agree!!!.

Guys, if you didn't like that I'm very sorry! Just keep yourself healthy, especially your teeth. Because If you want nice school pictures, you need some in your noggin. So don't go complete psycho on sweets if your mam or dad give you a euro save it for something better than just sloppy sweets! Anyways I think it's quite obvious on what I'm trying to say,

Keep your teeth healthy!

My Experiment.

1. I am going to get coke and a raw eggshell.
2. Crack the egg and put the egg shell into a clear glass.
3. Add in the Coke.
4. Leave to stand for at least 24 hours.
5. Take out egg shell and examine what effect the Coke had on the egg shell.
6. This is what Coke does to your teeth.

Here's a little song for all the younger kiddies! I feel bad for putting that graphic picture!!!

Its funny, and it's also educational.

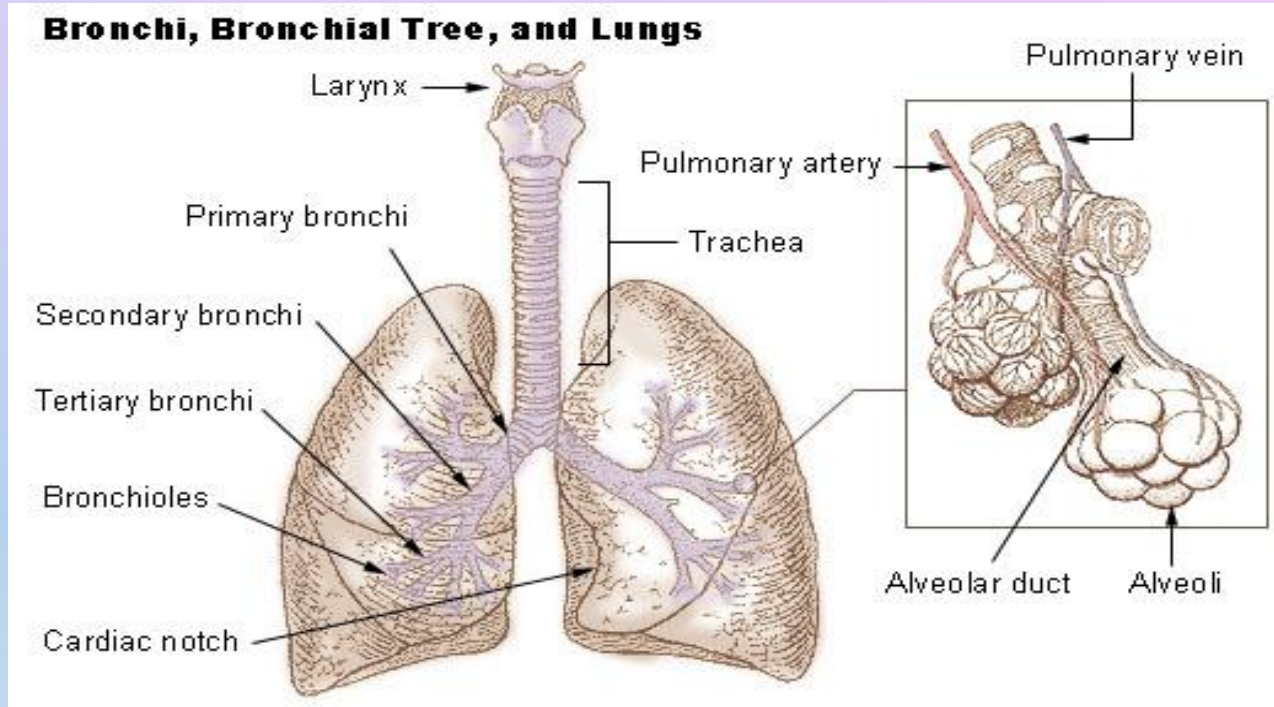

Lungs and Breathing~By Áine Ryan

We all have to breathe to live. We have organs especially for that! We can get all types of diseases in the lungs. And it can be scary a lot of the times! Diseases such as Cancer, Asthma and pneumonia. There are all sorts more, but I won't go into that yet! I'll tell you a few facts in the next slide!

LUNG FACTS!!!

- The right and left lungs aren't the exact same.
- You can live with only one lung! It may cut down in your physical life, But most people in the world already live with only one.
- An average person breathes in about, 11,000 litres of air!
- Most vertebrate animals (Animals with spines) Have two lungs

A DIAGRAM OF THE LUNGS...

LUNGS, TEETH AND SMOKING.

Smoking has many bad effects on your health. It mainly damages the lungs and teeth. Smoking causes cancer and other deadly diseases. ME and MAX are going to show you what smoking does.

- Smoking can cause gum disease and stain the teeth a yellow colour, Ew!
- Smoking makes a black tar around the inside of your lungs, That's why smokers have a hard time breathing.
- Smoking can also numb your tasting and smelling senses.

WHY DO PEOPLE SMOKE?

Smoking can be addictive and is hard to get rid of. Sometimes, when people first smoke they become addicted straight away.

The question your probably asking is, How can I quit smoking? Well, you just dont do it. Its bad for you. At least 67% of smokers **die** from smoking.

We are going to be showing you how your lungs work with a bottle and a balloon.
We'll show you in the next slide!

LUNGS EXPERIMENT!

You will need:

- Half a litre bottle.
- A balloon.
- A plastic band.
- And a rubber band.

Put the balloon on the inside of the cap around the outside like so. Put the plastic bag at the other end and secure it with a rubber band. When you've done this, pinch the bag and slowly pull it down and back. You will see that the balloon is blowing up, and down. This is an example of how lungs work!

THANK YOU FOR YOUR

Thank you...
